ABOUT HAVANA SYNDROME / AHI ANOMALOUS HEALTH INCIDENTS
Havana Syndrome, AHI (Anomalous Health Incident) is a rare condition that causes sudden, unexplained symptoms in people, often after a loud sound is beamed into the Victims head. Some of the symptoms that have been reported include headaches, tinnitus (ringing in the ears), harassing external sounds &/or voices, vision problems, vertigo, cognitive difficulties like memory issues, dizziness, emotional distress, hearing loss, insomnia, electroshocks, Frey effect hearing,” caused by pulsed microwave radiation, painful arthritic type of stiffening when Victim stands or sits for short or long periods of time. It often begins with a perceived loud noise or pressure sensation in the head or ears, where some individuals developed brain trauma and others experienced mild to severe forms of these symptoms depending on the individual. The suspected cause is believed to be directed energy weapon(s). 334 Americans, including federal employees in the intelligence community, spies, active & inactive duty military, FBI agents, diplomats, at least 15 children also current and former staff from various other agencies, as well as their <u>families</u> had qualified for military health care for this condition. This number does not include those who didn't apply for treatment. The Department of Defense (DoD) is currently researching and developing various scanning devices to detect directed energy weapons (DEWs), including high-speed, high-resolution cameras, specialized optical sensors, radar systems, and infrared imaging that can identify the unique characteristics of a DEW beam, such as its

wavelength and power density, allowing for early detection and potential countermeasures. Also: RF power density meters that take measurements of radio frequency-pulsed microwave signal strength to alert authorities, staff, employees of when & where of dangerous levels.

AUDIO ANALYSIS

By AIMEE'S Audio Analysis, Ms. Amy Holem | Aimee's Audios | (815) 307-4619
| AimeesAudios@protonmail.com.

SUMMARY by Aimee's Audios:

Risean Williams is a victim by authorization of Congress with the use of US government experimental line, NATO signals, and use of Directed Energy weapons (DEW). The DEW that was identified is not being used on Risean Williams but is within the same connection and network as his government personnel. The DEW was called a Nitro Laser and is in Lakeland Florida. Some of the weapon systems identified for Risean Williams were called the Predator, Hunter drone, hydro analysis kit with their Hydro tech and lightning bolt aerial unit. There were 2 colors of LASERs that were identified as well which were blue and yellow. Blue has a short wavelength for a laser weapon system and yellow is used for medical purposes. There is medical equipment that is being used on Risean Williams that studies nanotech, Bio state equipment, and monitors their heart using radio equipment.

The personnel working for the US governmental experimental line do admit they are trying to kill victims and refer to Risean Williams as a victim with the statement, **“are you serious we’re trying to kill victims.”** The US government personnel are trying to kill Risean Williams with attacks on his body. Some of the statements and locations are, **“temple extraction,” “change the victim’s heartbeat, attack the muscles around the heart,” “straight to his head,”** and **“connect through the nipples.”** The US government also is selling equipment to sex traffickers with the statement, **“ice cream radio settings are getting programmed,” “\$600 for the heart,”** and **“special victim it’s \$900 for the heart.”** Radio frequencies and equipment are being used along with video equipment for the attacks on Risean Williams. Ice Cream radio is a separate operation where the term ice cream is a representation of child trafficking operations.

FREQUENCIES:

About AIMEE’S Audios – Ms. Amy Holem owns the company Aimee’s Audios Subliminal Acoustic Fingerprint, Inc. who identifies communications within a telecommunication network. Information collected varies depending on multiple components which include the clients, recording device, time, date, when, where the recording took place, and criminal network connection. Any questions regarding her forensic process you can reach out directly to the company for answers. The information within the report is what was discovered within a COMPLIMENTARY quick analysis from the 30 second recording of the above named Victim submitted for analysis. A brief summary is provided about the information within the recording and what was identified within the 30 minute zoom meeting.

What is a quick audio analysis? It is a process of listening to sounds that are embedded in an audio recording. There is a potential of information that can be discovered from names, locations, companies, weapons, networks, aerial/space/ground units, equipment, software, IT technology, and more. A quick review is considered a written transcript of information and communications that was captured within the audio analysis. This is a written transcript of communications/statements / communications discovered.

Why can’t I hear the voices, sounds that were analyzed in my 30 second recording? Because humans cannot hear sounds BELOW 20 Hz which are called infrasound and sounds, voices ABOVE 20,000 Hz called ultrasound. Infrasound can also be **felt** as vibrations. Normally humans can hear frequencies from 20 to 20,000 Hz.

What are Undersea Telecommunication Cables?

Undersea telecommunication cables enable consumers, businesses, and governments, including the military, to communicate with each other and to access the internet. Private and state-owned telecommunication and technology companies operate about 486 undersea telecommunication cables, which connect every continent except Antarctica. These privately owned cables carry about 99% of transoceanic digital communications (e.g., voice, data, internet), including trillions of daily international financial transactions, and serve as the backbone for the global internet.
