

Vote Yes on Small Cell 5G Warrant - May 1st

Your YES VOTE on the 5G warrant will prevent 5G small cell towers from being installed in our town until it is proved safe.

Studies from all over the world have shown biological harm from wireless technology. The FCC was court-ordered in August 2021 to investigate the harmful effects of wireless transmissions, but that has not been done.

The World Health Organization (WHO) classified radiofrequency electromagnetic fields as a Class 2B possible human carcinogen in 2011 based on evidence that linked wireless exposure to brain cancer.

Do we need 5G?... No!

4G towers are doing a good job. **The 5G signal is disrupted by rain & trees! 5G speeds are not much faster than 4G.**

Fiber Optic is a better option. It's much faster, reliable, secure, safe, and not disrupted by rain & trees.

There are a lot of reasons to be concerned about 5G Radiation:

- Very high frequencies at low, short-range intensities, all day & all night, within feet of homes, schools, playgrounds, etc. You will not be able to hide from it! Property values will plummet!
- **5 G can cause:**
 1. Skin diseases, including skin cancer
 2. Cataracts and damage to the epithelial cells of the lens.
 3. Heart rate variability, such as arrhythmias.
 4. Weakening of the immune system.
 5. Depressed cell growth, especially detrimental to children with thinner skulls and bones.
 6. Lower resistance to bacteria.
 7. Effects on plants that could leave us with unsafe food.
 8. An increase in energy consumption contributing to climate change.
 9. A disruption of the natural ecosystem impacting animals, pollinators, plants & flowers.
 10. Headaches, migraines, chronic fatigue, insomnia, dizziness, nausea, nose-bleeds, memory loss, cancer, thyroid issues, autism, etc.
- **Did you know** these 5G frequencies have been under development for a number of years by defense agencies, including the U.S., Russia and China, as a means of crowd control?
- **Did you know** that adults and children in Pittsfield got sick from a 4G cell tower installed on their street! 17 families were affected and some had to abandon their homes! One teenager said she lost her health and the last 3 years of her childhood. ***If this could happen with 4G, imagine what 5G would do installed every 500-1000 feet on our town streets.***

Thank you for attending this meeting!
We will need a 2/3 majority vote to pass this important warrant!
