FORMAL PUBLIC COMMENT

Subject: Opposition to 5G Wireless Technology and Its Continued Expansion

I am submitting this statement as a concerned American citizen who strongly opposes the continued deployment and expansion of 5G wireless technology throughout the United States.

My position is not based on fear, ignorance, or a lack of understanding. It is based on extensive personal research, careful consideration of the information I have reviewed, and my deeply held concerns regarding the potential biological, neurological, environmental, and long-term health consequences of exposure to wireless radiofrequency radiation.

I firmly believe that the American public should not be subjected to widespread, involuntary exposure to a technology whose long-term safety remains a matter of scientific investigation and public debate.

I do not consent to the continued expansion of 5G infrastructure in our communities, particularly near homes, schools, hospitals, and areas where children and vulnerable populations spend their lives.

I believe that public health, environmental protection, bodily autonomy, and informed consent must take precedence over corporate profits, technological advancement, and government convenience.

The burden of demonstrating safety should rest with those introducing and promoting this technology - not with citizens who are concerned about its potential consequences.

I am calling for:

1. **An immediate halt to further 5G expansion** until comprehensive, independent, long-term safety research has been completed.
2. **The removal and discontinuation of 5G infrastructure** in residential communities and other areas where the public experiences involuntary exposure.
3. **Independent scientific investigations** into the potential biological and environmental effects of prolonged radiofrequency exposure, including cumulative exposure.
4. **Full transparency and accountability** from federal agencies, telecommunications companies, and policymakers regarding research, safety standards, and potential conflicts of interest.
5. **Meaningful recognition of citizens' rights** to question, oppose, and seek protection from technologies they believe threaten their health, families, and environment.

I am not requesting that the government simply reconsider the pace of 5G deployment.

I am requesting that 5G technology be discontinued and its infrastructure removed from American communities.

This statement represents my personal beliefs, conclusions, and opinions, developed through my own independent research. I accept full responsibility for expressing these views.

I respectfully demand that my concerns be acknowledged, documented, and considered in any federal decision-making involving wireless radiation exposure and 5G technology.

Technological progress should never come at the expense of human health, environmental integrity, or the fundamental rights of American citizens.

My position is clear: I oppose 5G technology, I oppose its continued expansion, and I support its removal.

Respectfully submitted,

A Concerned American Citizen
