A Report on Non-Ionizing Radiation

Cardis Previews Interphone Results

December 4, 2006
Last updated November 25, 2015

IARC's Elisabeth Cardis, who is running the Interphone study, gave an overview of the 13-country effort together with the results to date at an EC seminar in Brussels on November 20. Her PowerPoint presentation is well worth a look.

Cardis places special emphasis on long-term (ten or more ten years) risks of brain tumors and acoustic neuroma. She also contrasts the findings of the various national studies that have already been published with those of Sweden's Lennart Hardell and U.S.'s Peter Inskip (though Inskip's participants had many fewer years of exposure). The final Interphone results are expected next year.

Interphone, IARC, Elisabeth Cardis, Lennart Hardell, Peter Inskip,
