

Cosmic Clarity Connections LLC

Preliminary Non-Linear Junction Detection (NLJD) Scan Report

Client Information

Name: Jean Baptiste Daros
Date of Evaluation: November 5th, 2025
Location: Reno Nevada
Age 32 years of age
Client Contact jb.daros@gmail.com
Case Reference #: 2025-01140

Introduction

This report documents the results of a Non-Linear Junction Detection (NLJD) analysis conducted by Cosmic Clarity Connections LLC. The purpose of this assessment is to determine whether measurable semiconductor-based or corrosive-junction responses are present near specific anatomical regions.

This analysis is investigative only and does not represent a medical diagnosis, treatment, or clinical interpretation. All procedures were performed using manufacturer-recommended operational standards and NLJD scanning protocols.

Instrumentation

- EDD 24XT NLJD Device: Calibrated according to manufacturer specifications; multiple power settings and harmonic response levels were used.
- Spectrum Analyzer: Used to record environmental RF activity during the examination.

Assessment Methodology

1. A multi-pass NLJD scan was conducted over anatomical regions identified by the client.
2. Power levels were adjusted to evaluate both shallow and deeper junction responses.
3. Semiconductor and corrosive index values were recorded.
4. Environmental RF conditions were monitored to identify anomalies.
5. Any unusual readings were retested for reproducibility.

Client-Provided Background (Optional Section)

Client Submitted Input Survey- Relevant prior history

- Onset or progression timeline
- Known areas of concern

NLJD Scan Findings

Use the following table to document the NLJD scan observations.

Anatomical Region	Semiconductor Response	Corrosive Junction Response	Notes
Anterior Aspect			
Right Temporomandibular Joint Region	55%	0%	Slight Probability Semi Conductive
Nasal Dorsum	80%	0%	Moderately High Probability Semi Conductive
Left Temporomandibular Joint Region	55%	0%	Slight Probability Semi Conductive
Base of Neck	45%	0%	Inconclusive
Right Superior Shoulder	35%	0%	Inconclusive
Right Apex	35%	0%	Inconclusive
Left Apex	55%	0%	Slight Probability Semi Conductive
Right Superior Shoulder	40%	0%	Inconclusive
Upper Abdomen Midline	55%	0%	Slight Probability Semi Conductive
Left Hip	33%	0%	Inconclusive
Right Anterior Quadricep	25%	0%	Inconclusive

Posterior Aspect			
Occipital	75%	0%	Moderate Probability Semi Conductive
Base of Neck	55%	0%	Slight Probability Semi Conductive
Right Scapula	45%	0%	Inconclusive
Left Scapula	40%	0%	Inconclusive
Lower Lumbar	45%	0%	Inconclusive
Left Hamstring	50%	0%	Slight Probability Semi Conductive

Summary

The NLJD device identified measurable junction responses in select anatomical areas. These findings alone do not verify the presence of electronics or foreign materials. They should be considered preliminary indicators warranting further investigation. It is interesting to note that all positive detections that were found with the JM20 Pro also had a positive indicator with the NLJD scan in the exact same locations. Two different technologies with the same results.

Privacy & Confidentiality Notice

All findings are the private property of the client named in this report. No portion of this document may be shared, reproduced, or disseminated without the client's express written consent.

Disclaimer

This report is for investigative and informational purposes only. It does not constitute medical, legal, or scientific conclusions.

Investigator Biography

My name is Jesse Beltran. I am the former President of the International Center Against the Abuse of Covert Technologies (ICAACT) and have been conducting investigative RF testing since 2010. My professional background includes Network Computer Architecture, proprietary programming, and membership in the Mathematics Engineering Science Association (MESA) through the University of California, Davis. I am a retired professional firefighter and paramedic. I have certifications in technical surveillance counter measure protocols.
