

Comments on Notice of Inquiry, ET Docket No.13-84

August 29, 2013

Office of the Secretary
Federal Communications Commission
445 12th St SW
Washington DC 20554

Received & Inspected

SEP 06 2013

FCC Mail Room

I am 75 year-old woman with a Ph.D. in physics, and am hypersensitive to electromagnetic radiation. I react to radio frequency radiation at the current exposure limit, which is not restrictive enough for me and for many other people.

My access to public places is very limited because of things like computers and wireless technology. My reactions to electrical devices include the following: I get jittery, my body buzzes; I have heart arrhythmia, fatigue, insomnia, headaches, back pain and chest pain. My muscles don't work very well. It feels like there are chaotic energy pulses moving around my body. Sometimes it's hard to think straight. If I get within a block of a cell tower, I get shaky and uncoordinated and must leave immediately.

The only way to avoid disabling symptoms is to stay out of toxic environments. That is very hard to do in this society. It is only possible if you live in a remote area and never go anywhere.

Smart meters and other wireless technology are being promoted and installed across the country. This is especially troubling because the time in between the RF radiation pulses involved is shorter than the time it takes for vulnerable bodies to calm down after each exposure. This means that we are continually being exposed and continually reacting. This can cause serious health problems for electrically disabled people. Even if we don't have such devices on our property, the radiation can come into our homes from neighboring houses.

I am asking you to consider the needs of people who are disabled by radio frequency radiation and lower the allowable exposure limit.

Sincerely,

Ariel F. Barfield, PhD
