

Comments on Notice of Inquiry, ET Docket No. 13-84 to FCC

13-84

August 22, 2013

I was diagnosed with a glioma and had a craniotomy in June, 2008. While I am grateful that I am still alive, this illness has been devastating for my family and for me.

Scientists and other worldwide experts have reviewed my medical records and my cell phone records and attribute my brain tumor "more likely than not" to my ipsilateral cell phone use. I held the phone to my right ear for over 20 years when diagnosed and the tumor was in my right frontal lobe.

I did not have any other exposures. I am shocked and saddened by what I have learned and by how many others I have met that are now dying or already dead from brain tumors they or their doctors attribute to their cell phone use.

Had the FCC standards been set to protect me and others from the non thermal effects of this radiation I would not be enduring this horrific illness.

Please change your standards to properly protect others, especially children, teens and young adults from the agony my family has suffered.

Please have your standards reflect how cell phones are actually used by most people; smashed directly to their heads, kept in pockets and placed under pillows all night long.

Please provide disclosures at the point of sale as to safest use practices without pre-empting states or local governments from requiring greater disclosure.

Please protect the citizens of the United States NOW and stop the FCC collaboration with the CTIA- wireless association.

Please do not let my family's suffering be in vain.

Thank you.

Melodie Chrislock
