Brief Comment

We cannot roll out ultra high frequency waves without scientific studies of the effects on all life - studies by actual scientists in the fields of biology, ecology, and medicine. Tech industry engineers and physicists "assume" that longterm effects of ubiquitous high rf/emf waves will not harm us, simply because it hasn't been studied. That is preposterous. Understand, I am not against technological advancement, just against the cell towers and nonstop bombardment of the waves through our air, our walls, our skin, and our organs. I am already affected when near wave-emitting towers by ears ringing, teeth aching, and interference in focusing and sleeping. We see anecdotal evidence near rf/emf towers that shows bee hives collapsing, migrating birds disoriented, and aspen leaves malformed. What about humans? In most Idaho places, we don't require anything faster than 3/4G anyway. We should at least have the choice to bury the lines underground. But do not proceed without the scientific studies first!
