Topic: "Comments on Notice of Inquiry, ET Docket No. 13-84."

Received & Inspected
SEP 09 2013
FCC Mail Room

Dear Federal Communications Commission,

Thank you for requesting public comments on whether you should revise the standards for human exposure to radio frequency radiation.

Many scientists, health professionals, teachers and even the U.S. military know of the harmful effects of exposure to radio frequency radiation. YES, the FCC should revise the standards for human exposure, making it more restrictive in general, and even more restrictive in areas where children will be exposed, such as schools, libraries, and residential areas.

School children exposed all day to Wi-Fi have reported headaches, dizziness, and nausea. Adults as well have reported ill effects from exposure to Wi-Fi and other forms of radio frequency. Scientists have publicly warned about the harmful effects of radio frequency.

Please note that your request for public comments will not have reached a large amount of the general public, but most likely will have caught the attention of the electronic communications industries with monetary investments. I ask that you consider this when making a decision and I ask that you place your concern on protection vs. supporting big industry investments.

Sincerely,
Mary Baenen
