Re: Issues 19-226

The FCC's repeated refusal to consider biological effects from exposure to all types of wireless radiation shows a clear and dangerous intention to disregard the emerging science which must inform its decisions regarding public health.

The agency's reliance on organizations of physicists and engineers for advice on human exposures has resulted in a sole focus on "thermal" effects, despite THOUSANDS, YES THOUSANDS of published, peer-reviewed studies showing biological HARM, even at non-thermal levels, for various frequency ranges.

The FCC's own admission that it is unaware of any other types of effects demonstrates a failure to actively investigate the issue by proactively engaging with the scientific community studying the short and long-term biological impacts of exposure to humans and possible interference with systems of the natural world. Failure to seek out and consider the latest science makes decisions of the FCC suspect.

Moreover, the complex comment process used by the FCC virtually ensures that most commenters will be those who follow the activities of the agency closely and have a financial interest in the agency's decisions.

I, personally, have multiple illnesses, due to no fault of my own...Lyme Disease, Mold toxicity, Co-infections, Thyroid issues, GI issues. I found out over 25 years after I most likely aquired them due to shoddy medical testing. My immune system cannot handle the incredible harm put forth by this radiation. And, it absolutely baffles me that you would allow this to happen and harm children and those that are vulnerable without EXTENSIVE testing. Its WAY, WAY beyond shameful and SICKENING and I am absoutley ashamed to call myself an Amercian.
