Date Received	May 12, 2020
Address	83 webster road
State	MA

Proceeding	OET 19-226
Filing Status	DISSEMINATED
Date Posted	May 13, 2020
City	weston
ZIP	02493

I am concerned about the FCC's plan to establish exposure limits for higher frequencies without performing safety testing first, and without including input from physicians and biologists. I hold two Master's degrees- one in Public Health and one in Psychotherapy, and I am concerned about my own safety and that of the general public, especially our nation's children.

I am one of a steadily increasing number of people who has become sensitive to RF radiation- it has become almost impossible for me to travel or find a place to live without symptoms including pain, insomnia, and cognitive impairment. Although I found this hard to believe at first, I can now state that there are biological effects from the wireless frequencies currently in use, based on my own experience, that of many others, and review of the research. In fact, there are thousands of published, peer-reviewed, non-industry sponsored(!) studies showing biological effects, including harm from wireless radiation. (Some of these studies are listed here: <https://ehtrust.org/science/research-on-wireless-health-effects/>)

The FCC's repeated refusal to consider biological effects from exposure to all types of wireless radiation shows a clear and dangerous intention to disregard the emerging science which must inform its decisions regarding public health. The FCC's own admission that it is unaware of any other types of effects demonstrates a failure to actively investigate the issue by proactively engaging with the scientific community studying the short and long-term biological impacts of exposure to humans and possible interference with systems of the natural world. Failure to seek out and consider the latest science makes decisions of the FCC suspect.

Moreover, the complex comment process used by the FCC virtually ensures that most commenters will be those who follow the activities of the agency closely and have a financial interest in the agency's decisions.

Thank you for your fair and unbiased consideration of these matters.

Sincerely,
Margaret
