Brief Comment	<p>I suffered for many years from exposure to the electromagnetic frequencies emitted by computers, cash register scanners, cell phones, electrical line transformers, and other devices. I was disabled, unable to leave my home most of the time. Just this morning a technician installed a radio frequency emitting device on my propane tank, without any notification or request for permission. It is an outrageous violation of human rights to privacy, choice and freedom from bodily harm that the proliferation of devices and technologies emoting radio and other frequencies that are known for their harmful effects on living organisms. The FCC's failure to protect public health is harming me, my family, my community and our planet. The science is clear: radiofrequency radiation is harmful to all biological organisms (see the Science at Physicians for Safe Technology, https://mdsafetech.org/). We need non-thermal radiation exposure limits based on the peer-reviewed independent science (see https://mdsafetech.org/conversion-and-exposure-limits-emr-emf/). We need fast, reliable, sustainable, energy efficient hard-wired fiber-optics/cable/copper to the premises, not wireless infrastructure. We need reliable landlines that provide connections to emergency services during power outages. Satellites and wireless technology are not safe, nor are they reliable or sustainable in natural disasters (see Reinventing Wires: The Future of Landlines and Networks, https://electromagnetichealth.org/wp-content/uploads/2018/02/ReInventing-Wires-1-25-18.pdf). Please do your job and protect the public</p>		

repair, reuse, or recycle and protect the public and our planet instead of the wireless industry's thirst for innovation and profit. In addition, this online form for filing comments is very challenging to those with visual impairments. The text is very small and pale in color. Please make your site more accessible.
