To Whom it May Concern:

Re: Anita Ferensic BD: 1-13-67

Anita Ferensic is under my care for the treatment of significant sensitivities to numerous substances. Her diagnoses include Electromagnetic Field Sensitivity which is a physiological disorder characterized by symptoms directly brought on by exposure to electromagnetic fields.

Many patients exhibit health problems and experience symptoms when exposed to electrical stimuli. This is due in part to the person's bodily response to antigens. The body functions through cellular and intracellular changes in electrical parameters. Examples include: Electrical impulses originate in the sino-atrial node of the heart and initiate heart muscle contraction. The brain communicates and functions through electrical impulses carried from one nerve synapse to another. Cells assimilate and excrete through osmotic changes created by differences in electrical potential.

The intricate function of the body can be affected by exposure to coherent electro-magnetic fields created by power transmission and usage. In sensitive individuals, exposure to exceedingly low frequencies can create disruption in homeostasis.

Individuals who in the past may have experienced chronic or low level electro-magnetic exposure or acute high level exposure may exhibit symptoms resembling a feeling of shock, muscle spasms or seizures. Others who have sensitivities to pollen, molds, and foods may experience symptoms related to the problems of electrical stimulation such as a change in the pulse rate or arrhythmias.

The treatment of Ms. Ferensic's condition involves environmental controls, avoidance of unnecessary or excess electro-magnetic stimulation and management of inhalant and food sensitivities.

It is medically necessary that the new "smart meter" is not placed on her home or if present, that it be removed as soon as possible to prevent further deterioration of her medical condition. Your prompt attention to this is appreciated.

Sincerely,

James L. Ziobron, D.O.
