Brief Comment	My experience with wireless which makes me FEAR FOR OUR CHILDREN!!! February 3, 2016 I was staying at my daughter and son-in-law's while my home was being painted. Whenever they used their cell phones I would become restless and have weird sensations on the top of my head. This kept getting worse day after day with each cell phone use. I became unusually sensitized with hurting in other parts of my body and was finding it harder every night to get to sleep. One night, as my son-in-law and I were watching T.V. and he was intermittently on his cell phone, I had to ask him to refrain as I could tell the pain was getting worse every time he turned it on. Upon retiring that night, I had severe migrating pain, including, head, heart, chest, knees, left leg and difficulty in breathing (getting enough air and tightness). Sometimes, the pain would feel a little better in one part of my body only to get worse in another part or the breathing would get more difficult and this scenario kept repeating itself... This went on for 6 or 7 hours before I finally could get to sleep with the help of valium. I had a hangover the next day. I would call this an anaphylactic experience as it resembled other anaphylactic experiences I had in the past – Dilantin, x-ray dyes, arsenic (from fish) etc. In the winter of 2014-2015, I got sensitized to my HP laptop which was 6 or 7 feet away from me and hooked up to my TV. After I became sensitized to it, every time I used it I had the weird head sensations, chest pain around my heart, achy knees, and chest tightness and leg pain. I gave it away to my son. I have been zapped a few more times by these electronic devices but I think this suffices for you to know that I have an EMF allergy. I live a rather secluded life through no desire of my own! By the way, I have never used WI-FI only wired. This computed		

that I am now using is shielded. Please do not go higher up the spectrum, or we will have a nation full of sick children. Instead, take precautionary measures with what we already have!!!

Brief Comment	5G Spectrum Frontiers is a devastation to our health MY LETTER TO CONSUMERS TODAY FOR HARMFUL EFFECTS OF SMART METERS. August 11, 2016 Mrs. Martin Customer Service Consumers Energy This is in reply to your letter dated today. As you know from past correspondence, my health has taken a turn for the worse since smart meters were installed in my neighborhood. I don't think you can say these smart meters are safe just because they have been approved by the MPSC. The present standards used by MPSC are outdated and set way to high. Since those standards were set new (and old) research has shown that people (and I am one) are being harmed by non-thermal radiation, and business should act accordingly. In Sweden, EHS which is what I have, is considered a disability and the government finds you a safe place to live. Actually, the problem of ill health at "non thermal" levels which we are discussing here, was discovered among radio and radar workers in the 1930's. Russia accepted ill health at "non-thermal" levels in 1958 when it set much lower safety limits than the UK. The National Academy of Sciences' NRC accepted "non-thermal effects in 1986. Research by non-industry top notch scientists have shown damage to our DNA, the repair system which is needed to repair it, permeability of the blood/brain barrier, a decrease in melatonin and much more with exposure to non-thermal EMF'S. Could this be the cause or a co-factor of so many of our diseases today....Alzheimers, Cancer, Autism, Parkinson's etc? I have leukemia (diagnosed in 1994) and I've been allergic to electricity since back in the 70's when electric blankets caused migraines as did heating pads. You stated the smart meters Consumers installed do have a switching mode power supply. Since these meters were		

installed I have had an irritating electrical hum 24/7 in every room of my house. It's bad enough to make you want to commit suicide when you're trying to go to sleep. I use to fall asleep as soon as my head hit the pillow but now I have to work at it because of that hum! Then I wake up to go to the bathroom and I have to do the same thing all over again. My peace is gone! I read wireless smart meters with SMPS may add radio frequency spikes on house wiring (more common upstairs where there is often more exposure to neighbors radiation and my house is 2 story), create hot spots and interfere with other electronics. I believe all of this is taking place in my house. I bought a RF meter and found hot spots in my house and in other places I found the radiation spikes about every 7 minutes. My computer is causing me a lot of symptoms although it didn't before the smart meters were installed. It is spiking too about every 7 minutes and the wi-fi (of which I have none) is disabled. Although I've shielded it, if I spend two hours on it, my legs feel like ice picks are sticking in them. I understand too, these spikes are bio-active and have been linked to many serious diseases. Why can't Consumers hard wire my neighbors smart meter so I can have my peace back? Better yet, hard wire all of them so our precious children will not be injured I've enclosed some of my medical records so you will know how serious my health is. I don't exaggerate. Sincerely, Barbara Savoie
