Brief Comment	The FCC's repeated refusal to consider biological effects from exposure to all types of wireless radiation shows a clear and dangerous intention to disregard the emerging science which must inform its decisions regarding public health. Why would you rely on a physicist or engineer to determine biological health? Would you go see an engineer or physicist when you are in poor health as opposed to a doctor? That makes no sense. They have no knowledge of biological effects beyond their own limited scientific purvue. The FCC's own admission that it is unaware of any other types of effects demonstrates a failure to actively investigate the issue and leads any decisions of the FCC to be suspect. I am the evidence of biological harm. My doctor refers to me as the canary in the coal mine. Regardless of "how" scientifically it happens, the reality is...it does. The FCC is clearly and blatantly putting business and profit over people.
