Comments on Notice of Inquiry, ET Docket No. 13-84.

Office of the Secretary, FCC

Dear Secretary: I am responding to this Inquiry about revisiting the standards set by the FCC for exposure limits to radio and microwave frequencies. I believe the FCC set limits are much too high. They are not based on the reality and experience of the general public nor take into account those of us who are hypersensitive to them. Many independent studies exist all over the world, showing that much lower, constant exposure is harmful.

I was not troubled by any difficulty in the first years of cell phone use. But because this technology is not understood by most users and is entirely too unregulated there exist all over much higher levels then needed. I had a business in a new steel and glass building which had fiber optic and the most efficient and economic as well as safe would have been that all computers are plugged into the fiber optic for high speed etc. Instead the management nor owner understood the fiber optic and each of nearly 30 separate businesses had a different wireless provider; resulting in much higher EMF and a very unhealthy atmosphere - business persons getting sick and businesses failing. I had to close my gallery due to feeling ill so much. I eventually saved enough money to move the gallery to a part of the city that had more acceptable levels of EMF. But after almost 2 years there, AT & T turned on the hidden tower atop a hotel only one block from me. use Wi-fi can be perfectly adequate under .0005 w/m² yet in many homes and businesses it is over .5000 V/m. I was working with a web designer recently whose home due to his and surrounding neighbors wireless measured a height of over 5. V/m.

There needs to be further studies, an honest inquiry into independent studies and assessment of the actual EMF smog created and the actual heavy use by parts of the population, particularly teenagers; even toddlers use smart phones. The "precautionary principle" should be the guide not greed. The technology needs a lot of improvement, and people should have a say about health and environmental concerns. Our country can't function well with a lot of sick people. Democracy may be cumbersome and slow in cases like this, but people need the truth about this technology. So much, much lower limits are appropriate as well as the other measures mentioned.

Respectfully yours ,

Monika SteinhoffNo. of Copies rec'd

Washington, DC 20554

To the Federal Communications Commission:

I encourage the FCC to strictly regulate the wireless industry with much greater care for people's health.

The high levels of radio frequency radiation people are now being exposed to has already caused serious illness and disability to thousands of people. This has been well documented globally. We are no longer in the "precautionary principle" phase. Harm is being done. I am very concerned about everyone's health, but especially that of children, as they are the most vulnerable to RF radiation.. As the rate of chronic illness and cancer rises among babies and children, it should be unthinkable to expose them to more and more damaging RF radiation at home, at school and everywhere they go.

We have lost our freedom of choice. The extreme exposure to radiofrequencies has become unavoidable. I do not choose to use any wireless technology, and I pay a monthly fee to opt out of having a smart meter on my house, yet I am subject to constant radiation from cell phone towers and surrounding smart meter and other wireless technology. Children have even less freedom, as they are dependent on their parents and guardians to reject wireless technology at home and to advocate for better regulation.

Several years ago good friend of mine became seriously ill because of RF exposure, and she has not recovered. The only hope of recovery is to be able to avoid further exposures, but this is now impossible as cell phone towers are going up in previously remote areas and wi fi is everywhere. I learn of more and more people in my friend's predicament. It is not acceptable to sacrifice people's health, to devastate their lives, under the pressure of a profit-driven industry.

Thank you for the opportunity to comment.

Sincerely,

Linda Giannoni

To Whom it may concern:

FCC Mail Room

Who would have thought that wireless technology could ruin a person's life? Here is my story.

May 20, 2013 I went into the emergency room because I was having a complicated migraine. The migraine had symptoms of a stroke. I could not talk, it was hard to swallow, and my left hand and arm were numb. I could hardly understand what people were saying to me. I have no recollection of my husband removing my earrings or the chest x-ray they took.

The hospital ordered an MRI for me, which I had. From that day on I have been in misery. I went from my doctor to an ENT, a neurologist, and cardiologist trying to find out what is causing the pressure in my ears, the noise in my head, the heart palpitations, and the congestion in my chest and throat.

One day last February I turned the computer on, sat there less than ten minutes when I noticed my symptoms became much worse. I told my husband I felt like it was the computer causing my noise and pressure in my head. That evening we turned on the TV and I began having the pressure in my chest and heart palpitations. We have not been able to watch any TV. My husband started researching it on the computer but at the time only came up with a "blue light" sensitivity to wireless technology. I told my daughter about it and she personally knew someone who also was sensitive to wireless technology. She found a couple of web sites to look up so my husband went to work trying to desperately find some relief for me. I finally found a name for my symptoms: Electromagnetic Frequency Hypersensitivity or EMFHS or EHS.

It is costing us a small fortune trying to implement all the things we need for the house so I can at least have a somewhat safe place to live. But then again I have neighbors that use wireless technology that I can't get away from. I am in the process of having all my amalgams in my teeth removed since I hear what sounds like an old type transistor radio coming from me. EMH has also caused jaw and tooth pain. We have also found a screen that fits over the TV and computer screens. We cancelled Direct TV and went to cable TV. I still can't watch TV. It causes pressure in my chest and palpitations. There are very few restaurants we can go to that don't have the new bulbs. I can't sit near them because they make me ill. I can't go in restaurants that have TV's. There are two grocery stores I like to go to. Both stores use the halogen lights that make me sick with severe tunnel vision and nausea. My husband started doing the grocery shopping. One day I needed to pick something up so I thought I would just pop in and pop back out. I went in and picked up a few things and thought I had been in the store more than ten minutes. I looked up and they had switched the lights back to the old florescent. When I got up to the cashier I asked her about the light bulbs. I told her the halogen lights made me sick. She said they were making the employees sick, too. The same thing happened at the other grocery store. They changed their halogen back to the old florescent light bulbs, also. I can handle the old type of light bulbs a lot better than these new light bulbs that everyone is going to.

My daughter asked me to go hospital with her so she could have a procedure which required her to be put under anesthetic. I told her sure. We got there and they had the new light bulbs in the waiting area plus a couple TV's. I wasn't in there 10 minutes before I started getting sick. I had to wait outside. I

found out that my wireless phones in my home congested me terribly after talking on the phone for just five minutes. So we took them out and went back to a land line.

Not only all this, but I am having unexplained pain in different areas of my body. Right now it is in the front of my leg from my knee to ankle. Yesterday it was in the other leg. A couple days ago it was in my side.

To date I have had these symptoms:

Tingling sensation up the side and back of my head

Memory problems,

Teeth and jaw pain,

Heart palpitations,

Pain in muscles and joints,

Extreme dryness of eyes, sinus and nose,

Swelling in nose,

Headaches- migraine,

Nausea,

Tunnel Vision,

Chemical sensitivity,

Dizziness,

Pressure in ears and head,

Tinnitus (loud ringing in ears)

I recently went camping. I was hoping to eliminate at least some of the symptoms. It helped to some extent but not completely. When I returned home my symptoms were intensified. I had to run the washer and dryer which made the symptoms even worse.

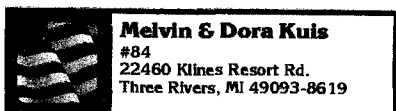

I have found a physician that has 2 other patients with EMH and she understands what I am going through. That in its self is huge. When I tell people I can't stay in church because the fan's that are running are causing me great discomfort, they look at me in disbelief. The electric company came around last summer and changed our meters out to "smart meters". That happened before I knew what I was suffering from. Not Good!

I feel I have a severe problem with EMFH. It has had a severe negative impact on my life. It has caused mental anguish as well as physical and social impairment. I am retired now and really wanted to travel. One trip I really wanted to go on was to Branson, MO. Now that will not be an option for me since I have to limit the EMF around me.

Sincerely,

Dora Kuis

After I had this letter typed up I took my granddaughter shopping for school clothes. I wasn't in the mall a half hour before I started feeling sick. I then noticed that all the stores she likes to shop in had those new little bright lights. I had to leave her to shop by herself while I waited outside.

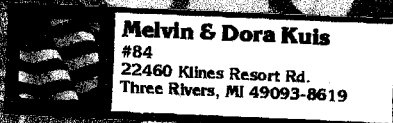

Please I am begging you. Let us have our old incandescent bulbs back. Please regulate where the cell towers go.

Please don't take away the use of the copper land lines.

I don't want to live like this the rest of my life.

Sincerely,

Dora Kuis

To The FCC:

FCC Mail Room

My name is Robert Sternberg. I am writing in regard to the FCC's radiation levels.

Ever since cellular antennas were installed right above my top floor apartment, I have been experiencing head aches, memory problems & cognitive issues at certain times.

I moved to a building with no antennas, but I still felt residual problems as these signals are present & proliferated everywhere for the cell phones to work. I can't get away from it.

I believe that a safe level has not been determined. I am therefore opposed to raising the levels. I would, and many others with similar issues, would be safer & healthier by lowering the levels.

Thank you.

FCC Mail Room

Dear Sir,

I urge you to significantly increase the restrictions on radio frequency radiation.

Radio wave sickness is real, disabling and increasing. I am homebound because of it- unable to go out in public, visit friends or even do my own shopping. I can no longer watch TV, use a computer or a cell phone.

The harmful effects of non-thermal radiation are well documented. Again I urge you to increase the restrictions on wireless frequency radiation significantly.

Thank you.

Sincerely,

Bernadette Jorgensen

I am 75 year-old woman with a Ph.D. in physics, and am hypersensitive to electromagnetic radiation. I react to radio frequency radiation at the current exposure limit, which is not restrictive enough for me and for many other people.

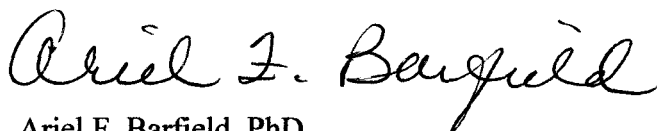

My access to public places is very limited because of things like computers and wireless technology. My reactions to electrical devices include the following: I get jittery, my body buzzes; I have heart arrhythmia, fatigue, insomnia, headaches, back pain and chest pain. My muscles don't work very well. It feels like there are chaotic energy pulses moving around my body. Sometimes it's hard to think straight. If I get within a block of a cell tower, I get shaky and uncoordinated and must leave immediately.

The only way to avoid disabling symptoms is to stay out of toxic environments. That is very hard to do in this society. It is only possible if you live in a remote area and never go anywhere.

Smart meters and other wireless technology are being promoted and installed across the country. This is especially troubling because the time in between the RF radiation pulses involved is shorter than the time it takes for vulnerable bodies to calm down after each exposure. This means that we are continually being exposed and continually reacting. This can cause serious health problems for electrically disabled people. Even if we don't have such devices on our property, the radiation can come into our homes from neighboring houses.

I am asking you to consider the needs of people who are disabled by radio frequency radiation and lower the allowable exposure limit.

Sincerely,

Ariel F. Barfield, PhD

Standards for human exposure to RF should be more restrictive.

In my family, several children were born with brain damage. The mothers of these children were users of cell phones while pregnant. My 3 children and myself suffer of electrical sensitivity, ES, a health condition caused by exposure to wireless radiation. My ES is life-threatening. See doctor's letter explaining how my ES is life-threatening. Exhibit 1B, Attached.

I have been injured, driven out of my job and home, I can not longer drive, travel, or stay inside buildings or a hospital, because the explosion of wireless technology.

The number of ES increases everyday. Some school districts are concealing evidence that the wireless devices used inside schools is making some children electrical sensitive, and is responsible for the high rate of sickness and absenteeism, for the high rate of children with terminal diseases and for the poor academic performance.

For a case in point See Jesus Mendoza et al, v. Sharyland Indep. Sch. District et al, Civil Case No. M-11-29 (S.D. TX). Undisputed evidence and claims established fraud on the Courts to conceal the fact that at school, students and teachers are being exposed to dangerous radiation, including power densities exceeding the federal safety limits. Respectfully Submitted,
Jesus Mendoza 31 August, 2013.

2202 E. 28th St. Mission, TX. 78574 (tel) 956-519-7140

June 10, 2011

RE: Jesus Mendoza

To Whom It May Concern:

The above patient is under my care. In case of emergency health care, please do not place this patient in close proximity to sources of electromagnetic radiation.

He is currently suffering from severe hypersensitivities to chemical fumes and odors along with electromagnetic sensitivity. Exposure to sources of radiation including power lines, electric motors, computers, fluorescent lights, and wireless devices, cause Mr. Mendoza severe pain, swelling of vital organs, breathing difficulties, speech impairment, and concentration and memory deficits.

If you have any questions regarding this please contact me.

Sincerely Yours,

Alfred R. Johnson, D.O.
