

Comments on Notice of Inquiry,
ET Docket No. 13-84

Received & Inspected

SEP 09 2013

FCC Mail Room

TO: Office of the Secretary
Federal Communications Commission
445 12th St, SW
Washington DC 20554

FROM: Valetta A. Kayda
15413 Ponderosa Loop
La Pine, OR 97739

August 29, 2013

I have severe Electromagnetic Field Hypersensitivity. It has devastated my life for more than five years.

I am in contact with other people who have this hypersensitivity. Their numbers are growing rapidly in the U.S. and worldwide.

The current standards for human exposure to radio frequency radiation have been inadequate to protect our health from wireless technology. I continue to suffer great pain when in the vicinity of wireless technology

No. of Copies rec'd
List ABCDE

and it is becoming only ever increasingly difficult to escape this exposure or reduce it.

Wireless technology has driven me out of my career as a speech-language pathologist. I am no longer able to practice my profession in schools or hospitals, because of their wireless environments.

Wireless technology has driven me out of one apartment triplex, six houses and six communities. It may soon drive me out of a seventh very rural home as the technology increases in strength and expands its coverage here.

As a result of wireless technology making me unable to work, a home I bought may soon be foreclosed.

I am also unable to live in a second home I own, because two cell ~~phone~~ towers have been installed across the street from the house.

I have struggled throughout these years since getting Electromagnetic Field Hypersensitivity, to find a safe place to live. I am still struggling to find such a place.

Wireless technology restricts my access to public buildings and services. Hospitals, police stations and libraries are

a few of the places I could not enter when my hypersensitivity was at its worst. These remain difficult places to spend anymore than a short time (less than 30 minutes) in. The wireless environment in these public places causes my health to rapidly deteriorate and increases my pain greatly.

It would be extremely difficult for me to be in an ambulance or undergo major surgery.

Wireless technology also negatively impacts my immune system and I have had many problems with that. I have become chemically hypersensitive and chronically fatigued, I have food and other allergies.

I am unable to use computers in the years since the EMFs Hypersensitivity, although I had enjoyed using them for the ~~last~~ ^{last} eighteen years prior to this hypersensitivity. I am also unable to enjoy many other activities or use many modern machines because of my hypersensitivity. Exposure to radio frequency radiation has imposed many limitations on my activities of daily living.

My life and the lives of others have been devastated by Electromagnetic Field Hypersensitivity and the current standards for human exposure to radio frequency radiation. These standards continue to be devastating to our lives. The FCC should revisit

these standards. Exposure limits should be more restrictive.

In addition epidemiological studies and scientific research, conducted in the years since the original ^{current} standards were written by the FCC, call into question the appropriateness of the current standards and point to a possibly reckless experimentation with people's health. This controversy over current standards for human exposure to radio frequency radiation is another good reason for the FCC to revisit these standards. Exposure limits should be more restrictive. The FCC should error on the side of taking precautions to protect people, rather than on the side of reckless experimentation with possibly disastrous side effects on the entire population.

If a larger percentage of the U.S. population develops Electromagnetic Field Hypersensitivity in the future due to the continuance of current standards, the U.S. will have a population suffering as I am, unable to purchase and use many modern devices, unable to live in communities, unable to maintain home ownership, unable to work. Imagine the impact such a population will have

on the U.S. economy and viability
of this country.

Respectfully and
Sincerely,

Valetta A. Kayda
