The Honorable Robert F. Kennedy, Jr.

Secretary

U.S. Department of Health and Human Services

200 Independence Avenue, SW

Washington, DC 20201

RE: Public Comment on Request for Information (RFI) regarding Electromagnetic Fields (EMFs), Radiofrequency (RF) Radiation, and Wireless Radiation Exposure (Docket No. HHS-OASH-2026-0397)

RF/EMF Leverage Force Multipliers:

1. Burning from outside in
2. Burning from inside out
3. Surface-to-Core Thermal Latency Burn
4. Polonium and Hafnium Amplification
5. Polonium and Hafnium Signatures
6. Polonium and Hafnium Targeting
7. Pulsating wattage to avoid detection
8. Pulsating wattage for entrainment of the body-brain electrical system
9. Electrical Injury Syndrome (EIS).
10. Social isolation and sensory deprivation
11. Diagnostic Overshadowing:

This occurs when healthcare professionals attribute a patient's physical symptoms to a pre-existing or suspected mental health condition, leading to the physical injury being ignored or misdiagnosed.
12. Medical Mimicry: This is a general clinical term for a physical illness that "mimics" a psychiatric disorder. For example, brain injuries or neurological damage can cause personality changes, irritability, or confusion that look like mental illness but are actually biological.
13. Subclinical or functional injuries in general

14. Cumulative Biological Load (Allostatic Overload)
Systemic Allostatic Failure.
Neuro-Endo-Immunological (NEI) Dysregulation.
It acknowledges that the Nervous (Entrainment/FND), Endocrine (Cortisol/Diabetes), and Immune (Lyme/Bartonella/Inflammation) systems are a single, interconnected web.
When one is hit by RF/EMF, all three collapse together.
15. Knowledge deficit created diagnostic gap for subclinical injuries
16. Toxicological Steganography—hiding one harm inside another.
17. Systemic Neuro-Psychological Attrition
18. Vicarious trauma to others
19. Vicarious terror to primary victim by seeing or hearing others injured or killed.
20. Inflammation of the brain and nervous system.
21. Duration – How long an unsafe RF/EMF wave contacts a victim patient is proportional to the damage or lack of damage that RF/EMF wave causes. In other words, it is not just intensity (power), frequency, but also duration of the impact penetration into the human body.
