I am writing this letter to you in regards to the rollout of 5G technology and why I believe it should be put to a stop. I do not consent to the rollout of 5G without proper safety studies from sources without conflicts of interest. There are lots of studies done on 5G and how it negatively impacts the cells in your body. The world's largest study (25 million US dollar) National Toxicology Program (NTP), shows statistically significant increase in the incidence of brain and heart cancer in animals exposed to EMF below the ICNIRP (International Commission on Non-Ionizing Radiation Protection) guidelines followed by most countries.

I will now tell you about my personal experiences with being exposed to it. My wife and I started living in an apartment complex in Green Bay, WI in 2018 and they had recently put up a 4G/5G tower right next to buildings. Minimal exposure should be within a 2 mile radius of a tower, but we were at least 100 yards away from this tower. I found out that I was sensitive to EMF radiation because I started getting horrible migraines since we moved in and my productivity levels were lower than usual. We decided to do some research on 5G towers and what we could do to protect ourselves from radiation exposure, so we found and purchased EMF shield devices. Within having these devices for two weeks, my migraines turned to small headaches and were less frequent, as well as my productivity level spiking. Now I'm not trying to say that these devices are the answer to combating the radiation exposure from the towers, they definitely do not keep you 100% protected as they are only shields. Recently we moved out of our apartment back to the northwoods, where we are miles away from any 5G towers, and since living here the last several weeks I have noticed an even higher boost in my productivity and almost nonexistent headaches. The only times I would develop a headache is whenever I would go into town where there are towers.

I urge you to do your due diligence (adequate research) on the negative health effects of 5G exposure and choose to not pull through with the project, as that will help everyone avoid health problems in the long run.

Thank you for reading my letter,

Marcus Daniels
