PREVIEW YOUR COMMENT

Compare medication usage, prescriptions written and filled for blood pressure meds and insomnia meds between 2010-2019 and compare to prescription prescribing spending usage 2019-2026.

The increase in prescriptions and diagnoses between two time frames is because almost everyone, almost every household got smart meters installed in 2019 and since then everyone is being woken up at night with blood pressure or arrhythmia symptoms that are triggered by smart meter signals. Smart meters are costing US prescription expenses and expenses for related services needed.
