1. & 2. Responding as: an individual
3a. Type of sources: WiFi
3b. Nature, duration, frequency, timing: Became sensitive after adding a second computer in 2008, connected by WiFi
3c. Adverse health effects: Severe sweats - 32 in 24 hours
3d. Time from exposure to appearance of adverse effects; did a change coincide with onset: Less than a year....added WiFi in 2008, severe sweats started in 2009
3e. Medical evaluation sought? Diagnosis? Mistakenly thought to be hormonal - treatment failed to change symptoms
3f. Steps taken to reduce exposure; subsequent changes in effects: Initially heard about turning WiFi off at night, which I did for 2 years - 2016 - 2018. Happened to leave WiFi off for 24 hours LaborDay weekend in 2018, and sweats dropped instantly ~60%
3g. Supporting documentation: I checked the computer room with a RF meter, and it was in the 'red' at the door!
Additional Details: When still exposed to WiFi, I could 'feel' most tablets and cell phones when active. It has also helped to remove the electronic water meter and return to an old 'read-only' type.
B1a. Sources experienced as causing Adverse Effects: WiFi - when was on in the house. Bluetooth. Electronic water meter.
B1b. Sources can sense, but don't harm: Other peoples' cell phones
B1c. Can use without sensing: Electricity meter - I think
B1d. That provide benefit: Rife therapy. Homeopathy
B2a. Health conditions that may contribute: I have M.E - Myalgic Encephalomyelitis
B2b. Other health conditions: __
B3. Drugs, therapies, remedies, or practices:
B3a. Can recommend: Turn off WiFi and keep it off!
B3b. Can recommend, but not positive they help: __
B3c. Helped but don’t recommend: __
B3d. Treatments having no effect: __
B3e. That made sensitivity worse: 65-74
B4. Age range: 65-74
B5. Year you became aware of your sensitivity to RF/EMFs: 2018
B6. Country, state, province, or city lived in when first noticed sensitivity: London, Ontario, Canada
