October 18, 2026

Dear Department of Health and Human Services ,

The communications industry is bombarding human exposure to electromagnetic fields. These careless actions have increased during recent decades. This scientific study investigated the effect of exposure to waves emitted from the base transceiver stations (BTS) on men workers' health ("Base transceiver station antenna exposure and workers' health". by Hosseinali Rangkooy, Afshin Rahmati, and Behzad Fouladi Dehaghi *International Journal of Occupational Safety and Ergonomics* (JOSE), Vol. 29, Issue 2 (2023). There were two groups in this study. One group was exposed to electromagnetic waves exposure , and the other group was not exposed to electromagnetic waves. The scientific data on blood parameters were assessed in the working men. The white blood cell and red blood cell counts in the control groups were measured per ml, respectively. Analysis of the results showed that the different critical high levels with the thirty year old men in this medically tested lsetting showed that each men's levels of their anxiety levels were higher, and also their scientifically tested levels of insomnia as well. Both scientifically areas showed a critically significant difference between the two groups.
It was scientifically concluded , that the clear results revealed that blood parameters in the BTS operators showed more traumatic critical health changes. Thus, it can be concluded that these health impacts result from occupational exposure to BTS waves. This is a critical issue. Please respond to my letter.
