

FCC

Here is some information I believe the FCC should review when addressing the concerns about wireless radiation: ***PLEASE read these links then read my story. I wish I could tell you my whole story but hopefully this is enough for you to see the similarities. See the connection. See this is real. We are real. You want proof? Here I am...***

[Electromagnetic Hypersensitivity: Exploring The Condition](#)

[Electromagnetic hypersensitivity \(EHS, microwave syndrome\) - Review of mechanisms - PubMed](#)

The FCC is not a health agency and does not have expertise in medicine, biology or public health. Yet, the agency continues to assert authority over RF exposure standards and is preparing to reach conclusions about whether its existing guidelines adequately protect the public.

I urge the FCC to recognize the critical role of federal health agencies, including the U.S. Department of Health and Human Services, and to rely on appropriate health and biological expertise when addressing the issues identified by the court.

This issue matters to me personally because:

I lost my whole life, became homeless due to mold exposure, medical issues & effects of RFR & EMF's. I suffer every day from (EHS) Electromagnetic Hypersensitivity. I learned it wasn't my first exposure. EMF's amplify mold... My story's too extensive to cover in one comment. I'll try & be brief. I can & have proven I have EHS despite what or "Who" says so... it's not DUE to a psychiatric condition. It DOES CAUSE them. It's real. It causes anxiety, depression & more. Mainly because people won't listen or believe you. Mostly because of the suffering. It's torture. People think I'm exaggerating. I'm not. I'm tortured with thermal burning like pain in my eardrums & brain. I struggle understanding a lot of these tests & "double blind studies" I see online that say **"Inability to Detect EMF"**. A Dr. must've wrote that...Because then EHS isn't a real illness...Who are they testing? Not me... I CAN & HAVE proven it MANY times. Pain from EMF's & RF Radiation, Bluetooth, 5G wi-fi, utility pole outside my door/window, my daughters iPhone 12 (worse after screen cracked) causes thermal burning like pain, zaps like little electrical clamps inside my eardrums electrocuting me. I can't be the only person living with this.

I sense things other people can't. I read stories about "The Who" & wonder "Who are they?" & others who say EHS can't be proven. "Who" are they testing? Just rats? lol. They don't talk much huh? I can prove my EHS. Test me. Any time. I have proven it. Multiple times. I call it my Spidey-Sense. My Son used to call me a Super-Hero when I worked two jobs. I never wanted to be this kind of Super-Hero. Because now I can't work at all. But try & prove that at 54 years old with invisible illnesses after working since you were 14. I can tell you if your Bluetooth is on. Except in a car. I couldn't figure that one out. I research EVERYTHING I FEEL trying to figure out WTH is wrong with me to get well, get out of this torture chamber of a "supposed to be home" they put us in, because Dr's don't. Not when it comes to EHS & mold. Throw their hands in the

air. Tell me I'm lying, making it up, tried testing me in a car with their Bluetooth saying I was lying because I didn't say anything about their Bluetooth being on. I can tell if I'm IN the house & a phone is in the car with the Bluetooth on in the driveway, I feel it, sometimes in a car across the street. But if I'm in the car with it, I don't feel it. If it's in the house with me, I also feel it. I told them that & they didn't believe a word I said. I almost didn't believe it myself because I didn't have A CLUE WHY at the time! But I've NEVER lied about it, what do I have to gain? Im not over here living the high life. Im living a literal hell... I found a story later that said automobiles are essentially "faraday cages" & that's why I can't feel it in a car. You see, I am a "Canary" (at least that's what they call people with EHS) & if theres someone who can build me a Faraday cage large enough to live in, my daughter would have the Mother she deserves. What I still don't understand is why doesn't it block me from feeling it from inside the house when the phone is in the car? I really need someone to explain that to me lol. Bluetooth causes a thermal burning type of pain (torture) in my eardrums. Multiple on at once is a living hell I can't outrun. Add 5G wi-fi? My mom tried switching AT&T to Xfinity. My head almost exploded when they turned the router on. She couldn't keep it. I detected a defective Lithium-ion battery in her Lifeline necklace in the next room due to overcharging. Caused me to have focal seizures, migraines, auras, a pulsing throbbing burning nightmare that wouldnt stop until I could convinced her to get it out of the house. Trying to convince people to turn off their router at night or just move it around the corner behind a wall because it's safer & causes me less suffering was harder than you think. Also have Multiple Chemical Sensitivity. Try asking them not to use bleach, air fresheners, perfume, or here's the best one of all...asking them to keep their home at an ambient temperature because you have a neurological disorder & can't regulate your temperature. Guess what? Humidity breeds mold. EMF's amplify mold. I think I said that before lol. Everyone should keep their home at an ambient temperature!! I never asked anyone to do anything that wasn't a healthy clean option/alternative way. I can also smell mold. Have proven that also with mold tests I had done & people that chose to listen & get testing done. I have cognitive impairment from many years of undiagnosed Epilepsy. I also have spondylolisthesis from being hit by a car on my bike when I was 9. My pain started at 19. So people don't want to listen to me & act like I don't know what I'm talking about but I've researched all of this because I'VE LIVED IT! I STILL LIVE IT! Michael J Fox said " THIS MESSAGE IS SO SIMPLE, YET IT GETS FORGOTTEN. THE PEOPLE LIVING WITH THE CONDITION ARE THE EXPERTS." Yet people look at me like I'm dumb as a box of rocks when I say do you feel that? When the floor is vibrating, my heads pounding or my eardrums are burning & pulsing. Some days my executive function is non-existent & thats usually when I'm being bombarded with 5G wi-fi, Bluetooth devices & more. I struggle to complete tasks on time, this comment coming in at the last minute for example. I have to have Google help me do everything. I sometimes have seizures, auras, heart palpitations, migraines, fatigue... then a few days later they've had a broken appliance... water on the floor from a broken hot water heater my body detected days ago... at a friends house, my

EHS got really bad I think. Pushed over the edge. Security systems, cameras, EMF's galore with electronics, neighbors had a TESLA across the street, Drones hovering over the house at night (I haven't mentioned RF RADIATION, BLUETOOTH & LED damage that drones cause. I filed a complaint with the FCC. No one cares. I became homeless & lost everything! I was stuck in an environment where me & my daughter continue to suffer & get worse while the world turns a blind eye to us because we don't matter. A woman that worked her whole life, who now the world sees on assistance doesn't matter. She doesn't need help. I can feel the drones coming before I hear them! The noise floor in this apt & the homeless shelter we were in has caused my hearing loss (SSHL) & EHS & Hyperacusis to worsen. I've always been sensitive to EMF's & electronics, actually electronics usually broke in my presence, computers, light bulbs, not kidding... but I wasn't "tortured" like this or knew about EHS until 2023. At a friends house in Ohio in the basement visiting. My daughter & I sleeping, my head starts pulsing & pounding. Whoosh like my brain will explode out of my head, ears start burning, sat up thinking I'm having an aneurysm or something. Of course I Google what it could be. I read all kinds of stories about EHS & EMF Sensitivity caused by mold exposure. It wasn't until later that I learned it could happen with people with Epilepsy also & neurodivergent people. This one link said the wi-fi router close to your bed/head could cause this. They also had mold in their house they just remediated so that huge router was likely the culprit. I looked around & there was this BIG square thing on the wall right next to our bed where we were sleeping!! I thought no way! I couldn't take the torture anymore & it was late. I figured everyone's asleep, I'll test it. I unplugged it.WOOooooosshh! The pressure & pain STOPPED! It was that! I couldn't believe it! I didn't tell ONE soul about that or my EHS for a LONG time in fear of tin foil hat jokes. It has progressively worsened ever since with every exposure. The last house I told you about was in 2024. Being homeless we stayed with people at times. Sometimes my car, sometimes my daughter & I slept on the street after my engine blew & I couldn't get help fixing it. Honestly I was happier & healthier in my car & knowing now it was a faraday cage, it makes sense. I was at a healthy weight. The last two years I kept losing weight, my BP was normal. Now my BP will fluctuate from high to low. I wasn't tortured because I wasn't "stuck" near multiple 5G routers & Bluetooth devices burning my brain & eardrums. I wasn't having reoccurring seizures. They were managed with medication. I just had a seizure in the MRI machine at my Lumbar MRI due to excessive RF radiation. How do I prove my disability when they need more tests but my body can't tolerate those tests? When do people start listening to people like me who can walk into a room & prove this illness & are so desensitized that they can feel if your Bluetooth is on or if your phone battery is dying or is on 5G vs 4G LTE or if electrical wiring is broken/wrong or if the cord is falling out of the wall. Before I knew about Apples 40/80 rule I could feel if my daughters phone battery went below 40% & when it was fully charged. I always joke & say if it's MacGyver'd I'll feel it. Things have to be done the right way for me to survive & not suffer. When I was married, my husband used to MacGyver EVERYTHING. I used to get so mad & try & make him do it the right way. Maybe I actually suffered from it without even realizing it. Maybe it was affecting me & that's why I just HAD to have it done the right way! My

daughter has Tourette's Syndrome, ADHD & Anxiety & she's been to the ER for a mental health evaluation since living here, put on new medication & an extensive outpatient mental health therapy program so its clearly affecting her also. She's like a different child than the happy child she used to be. Our world was turned upside down & the world doesn't think she deserves a safe healthy happy home or Mother so she's angry & doesn't know where to direct that anger. I was in fight or flight mode most of my life fighting battles & illnesses I didn't even know I had while working two jobs taking care of my kids. I didn't deserve that & neither did my grown children. The Neurodivergent in me needs things done the right way! That's why Bluetooth & 5G, RF radiation (which I've had excessive exposure to due to my chronic back & neurological issues), wi-fi exposure at work & cell phones, public places, now a low-income apt I was "stuck" in suffering everyday right in the middle of all of it bother me so much, because none of it is "the right way". It's all an unhealthy, thermal burning, toxic nightmare that ***caused Pulsatile Tinnitus, Vertigo, Sudden Sensorineural Hearing Loss, Hyperacusis, Multiple Chemical Sensitivity (Idiopathic environmental illness), autoimmune disorders, thyroid disease, my thyroid labs were abnormal the last time I had them done I was Hypothyroid (with no thyroid) so my hormones had to be adjusted. Excessive EMF exposure can cause this. THEY PUT me next to an electrical utility pole after I became homeless due to mold exposure, at a homeless shelter & now again in the apt we got with a housing grant at the homeless shelter, where I was having seizures due to that electrical utility pole & hotspot router outside my window, I told them I needed a single family home. That I couldn't live in an apartment due to multiple Bluetooth devices, LED lights (those burn my eardrums & brain) that I couldn't live near water or a utility pole...***

THEY PUT ME in an apartment with a utility pole right outside my back door/window. (Also a gas pipeline outside my bedroom window next to the utility pole...) I can't make this stuff up...I even have a letter from my Neurologist at the University of Michigan requesting a higher housing accommodation payment amount due to my medical issues, listing the Bluetooth, wi-fi, seizures, all of it, still, here I am...I've had increased seizures, migraines, non-stop exhaust & gasoline auras. It feels like little electrical clamps inside my ears electrocuting me, zapping me, burning me, heart palpitations, blurred vision so bad I can't see at all sometimes. Paresthesia in my feet, when the electrical zaps go through my toes from the torture of the floor vibrations that vibrate what feels like every organ in my body keep me awake all night with insomnia. I just lost my big toenails. I had to have toenail removal surgery due to Plummer's nails & onychomycosis so when those zaps go through those toes now it's a sensory nightmare. I have no thyroid due to a Thyroidectomy in 2018. I had Non-Toxic Multi-Nodular Goiters most of my life that became toxic in one of the many homes I had mold exposure in (I didn't know about the mold at the time) EMF's AMPLIFY MOLD! I've seen proof of this with my air purifier alone. The loud raspy noise from the speaker from my Moms large flat screen TV almost busted my eardrum, I sat up startled, she didn't hear a thing because she's about deaf, air purifier turned instantly from blue to red. I have other stories also about EMF's & mold. I had Hyperthyroidism

& Graves Disease.

I urge the FCC to give meaningful consideration to the experiences and evidence before it and to fully address each of the issues identified by the court.

Believe it or not. This is not my full story. I hope it's not too much information to be overlooked but enough to make a difference.
