I am a Health Practitioner for over 20 years as a Massage Therapist. Preserve old technology, oldschool, low technology by making it available for the: People With Special Needs including Electric Sensitivity, People With Disabilities, and People Who Are Medically Challenged. Make a law for all high technology companies saying do not make old, low technology obsolete. Have analog and basic technology readily available as an option so there is no need for special accommodations.

Computer screens have led backlights & I believe should be made w/TFT-LCD & not led so it doesn't burn eyes. I believe TFT-LCD doesn't flicker or irritate eyes. We have to also put screen UV Protectors on our monitor screens so it prevents us from getting bloodshot red eyes, bursting bloodvessels in the eyes, because without it, it ruins and destroys the delicate bloodvessels in our eyes. This is how to keep eye clear. The computer screens need to already come with these UV screen protectors.

Since we have EHS-Electric Sensitivity, we have been using a computer screen monitor that is over 20 yrs. old just to protect our health. We have to get a hold of old screen monitors which is very hard to do but we go to this extent. We know others who also use old computer screens just to protect their health. The computer industry should always give us a basic model option with low technology. We should have no wifi options & low power options. Right now we have a Shuttle Barebones low power computer & keyboard extension & old rollball mouse. I have to have an oldschool roll ball mouse that is used that lasts forever, can be cleaned for maintenance. THey need to bring back oldschool rollball mouse because they do not have lasers in them burning our delicate hands, they also hold up for years & they are not made anymore, they need to enforce them being made, all companies who make high tech things should be enforced to include LOW tech items for sensitive, disabled & safety purposes. Also toys shouldn't have lasers like Mario Legos, which once we got it and son's eyes were red after using it & we got rid of it & then his eyes cleared up right away.

The new LED car spotlights that blind people should be banned, since they were invented I cannot drive at night time & a lot of others cannot drive at night time anymore without being blinded by the new LED car spotlights. Bring back warm glow incandescent low beam car lights or something close to it, yellow warm lights that don't burn our retinas & blind us & distract drivers.

Television Companies need to come up with televisions that don't have led lights, Bluetooth, or wifi. I still have to use an over 20 yr. old television to avoid new tvs that hurt the eyes, and the levels of radiation are causing inflammation, burning and numbness symptoms. Bring back old speakers w/the magnets, I have to use my old speakers not just because they are good, but because they are the only ones that don't have bluetooth & wifi. They are not wireless. Bring back old speaker options. Bring back cameras with no wifi options, & video cameras, ones with no touch screens, just buttons. Bring back appliances with dials only, no

digital clocks or digital heating, ones that use only coils, basic stove, ovens. There are only a few left, or none. The new flat top stoves have lasers that heat up food and the high radiation levels cause inflammation and give us symptoms, pain and dysfunction. We avoid using these and microwaves because of dangerous off the chart radiation levels, high amounts of EMF. We did not need to test it on our meter because our body showed symptoms of pain and dysfunction. When we got rid of the flat top oven, the pain went away immediately.

Enforce that every auto company provide a basic low tech. option. The new fancy vehicles force wifi since it is integrated in the system. I can only drive an SUV that has no wifi or bluetooth, low power, no high tech. features. I can not drive a car because the motor is too close to the driver and that causes high EMF levels that cause pain and dysfunction. I can only drive an SUV where the motor is far away from the driver. SUV companies like KIA should be enforced to always have an option to get a basic vehicle, Basic SUV. I cannot have seats that cook us alive. We cannot have interior car lights that cook & fry our eyeballs. I have to have a low tech, basic vehicle with no satellite radio hub, no wifi and no bluetooth hub. Keep all Basic vehicles "BASIC" with no integrated wifi/Bluetooth/satellite hub. The car company told me that only the basic model allows us to remove the wifi/Bluetooth/satellite hub. That fancy screen hub needed to be removed from our vehicle. Allow & reinforce basic features for Electric Sensitive, Disabled, and Medically Challenged people.

If there is a bank teller or a shopping checkout that forces us to use a sensor, handprint or force us to touch the electric screen so we can become electricuted for just a brief moment, I go to the extent to avoid that for health purposes. Our bodies are electric & we are forced to become one with an electric machine that zaps us. How many times per day does it zap us? Just say no. I ask for the stylus, it should be always available, I bring my stylus with me. There should always be a button option for the sensitive, disabled, and medically challenged, and this needs to be enforced as a law. These things need to be done to stay and become healthy.
