Computers, Antennas, Cellular Telephones and Power Lines Health Hazards

VOLUME III

Marija Matich Hughes

SYMPTOMS

SKIN: red rash, red face, chest, legs, arms hot and clammy

CRAMS: painful, electric shock type cramps; painful muscle spasms of both extremities, muscles twitching
burning skin
burning the entire body when hot, or very cold

HEAT: sweating too much when near a computer; afterwards very cold; chills
sweating under the fluorescent lights; heavy perspiring, clothing drenched
sweating when under any lights

lights: sensitive to any light, even the light bulb
fluorescent lights
sunshine
headache
itching

dizzy: fell injured right index finger 11/24/88
fell into moving traffic, broken right shoulder 3/9/89
fell at the airport, broke left wrist 12/22/90
severe headache, computer too close to me
dizzy leaving Metro, hit by Metro door 5/18/93

HEAD: constant headache, severe dull headache
poor memory
when written right-I turn left; confused about directions

NAUSEA Vomiting
last three weeks when brushing teeth, nauseated, vomit,

SPEECH at times difficulties, stutter, cannot get the words out

NOISE extremely sensitive to sound, causes pain
cannot listen to music, cannot tolerate loud noise

STOMACH: under neon lights painful cramps with diarrhea
often undigested food in the stool
when at work diarrhea; off work no diarrhea

FEET nerve pain, must wear shoes with thick soles to dull the nerve pain

HEART: fast palpitations 9/22/88
12/1/88 GWU ER
10/19/88 Presbyterian Hospital ER, Dallas
1/10/89

Comments on Notice of Inquiry, ET
Docket No. 13-84

Received & Inspected

SEP 09 2013

Sept. 2nd, 2013.

1.

FCC Mail Room
original copy

To whom it Concerns:

In July, 18, 1945, I was a fetus of approximately 30 days, in the womb of my mother. My parents were fishing and camping at "Eleven Mile Reservoir" in "South Park", a high Mountain plateau of the Central Rocky Mountains about 380 miles from Alamogordo New Mexico, when the first above ground atomic bomb test was detonated. I may have received a wave of gamma rays then. During the successive years until the late 1970's, all major military Nations were conducting above ground testing, and detonation of atomic bombs. Eventually the International Anti-Nuclear Movement of civil-protests brought a moratorium against above ground atomic bomb testing. Although not all Nations have complied.

Inquiry, ET, Docket No. 13-84

Those anti-Nuclear protests based their protests on independent Scientific research which proposed that radio-active fall-out, was a real health hazard to human life, over time, even at small dosages. The Atomic Energy Commission denied there were health hazards from above ground testing, basing their arguments on Scientific research they paid for.

This was the most egregious of the deluge of technological advances which were hugely profitable, but which proved to have serious side effects which caused health hazards. In all these incidences those industries paid for private scientific studies to refute the public's claims of their responsibility to address and mitigate their health hazards. Some of those lengthy litigations were won by the public, and those offending industries were court mandated to clean up toxic waste, and to pay reparation to those injured.

3. of 3.

Now with the advent of the standards for the amount of radio-frequency radiation emitted by cell phone towers, regulations which operate as laws which the public never voted on, that were devised to protect the cell phone providers and cell phone tower companies, from the public ever bringing health concerns evidence to any court of law to protest the health hazards that are associated with microwave radio-frequency radiation's effects on the health of living organisms, including human life. As you are fully aware those regulations were passed in 1996 by your agency.

My own struggle with these health hazards became undeniably evident by April of 2007. I probably was electromagnetic hypersensitive from early in my life based on my memory and conjecture of earlier exposure to dirty energy. Also I am a consistent journalist and thus have consistent writing of all life

events. In this case of my
events of out-breaks of
E.H.S. (electromagnetic hyper-
sensitivity) I also have taken
time dated digital pictures of
the terrible condition, and
there are numerous witnesses
to this illness too.

(When I was eleven years old
I lost my balance climbing on
a shed roof and grabbed a high
tension electrical cable that was
prayed, and was momentarily
electrocuted, but luckily it
broke with my weight ~~85~~¹⁰⁰ lbs, and
fell I fell in a pile of leaves.)

From the time the local
phone company erected a
cell mast with a microwave
dish in Naturita in the fall of
2006, 300 yds from the
trailer I lived in with my
3rd husband Tom D. Riley Sr.,
the two of us began to
develop insomnia, sinus
problems, an increase of
respiratory illnesses, irritability,
and extreme fatigue and
achiness.

We were trained several times
by the P.A. at the Basin Clinic,
and eventually were
prescribed 25mg. seroquel for
sleep since over the counter
sleep meds couldn't keep us
asleep at night. Now the
less we then combined the
prescribed med with the
nonprescribed sleep meds to
be able to obtain even seven
hours of sleep.

I was working both as a
C.N.A. for a nursing agency,
and shortly after that obtained
a job as a Speech Therapist AID,
in the Public Schools, since
a Doctorate Mastered Degree
SLA, couldn't be hired for another
year. After that part time
job expired, I was hired by
The Federal Census Bureau as a
2010 Census Taker. In all three
incidences of hire, I declared
that I have a prescription for
Vicoden for pain when I have
specific symptoms of pain,
and that I take sleep meds
too. In all 3 instances of hire,
I passed the drug urin test,
and passed the 10yr background

... test as well. For working
in the Public Schools of the
"West End" of Montreal, and
San Mequiel County; I was
fingers printed and passed
these background tests.

3x - since I became a
substitute teacher to all grades,
after the Speech AID job
expired. Unfortunately the
effects of exposure to
radio frequency pollution,
was increasing as the
public consumed and used
more and more, I-pads and
stronger signaled cell phones.

In 2007 I had 3
out-breaks of a neck and
face skin burn, that only
began to heal when I
rented a hunting cabin out
in a semi wilderness, each
"outbreak" consisted of
extreme heat emanating
from these tissues, which
went layers deep, affected
my eyes, and mind which
although I was seen at
both local medical clinics,
no one knew what was the cause.

Born local Clinics P.A.s took blood samples and had those vials of blood tested for all known diseases, and all came back normal, from those lab. tests.

The P.A.s who saw me saw the terrible skin condition, and could see that I was suffering, but didn't believe me when I told them that my husband and I had researched this on the inter-net, and had verified that this was the results of radio-frequency pollution caused by cell-phone radiation and cell-towers radiation. We gave them the print outs of the World Health Organization's findings that 3% to 6% of the World's population suffers from E.H.S. and what these symptoms are, and that cell-phone radiation is classified as a Class-B Carcinogen. We gave them the print outs of the history of other countries

responses to their citizen's
health concerns about cell-
phone & tower radiation,
which included Sweden's
moving cell-towers
away from towns; Cestian
villages and towns in
Turkey utterly banning
cell towers and masts
within populated areas ect..

So far my increasing
episodes of skin burns on
my neck and face - forced
me to flee my home and
find temporary lodging
in low cell radiation
signal areas, as the only
way to recover, increased
in reoccurrence to
49 episodes over the past
6 years, renting 11
different places, and
moving out of my
husband's trailer altogether,
the facts still get no traction
and we are suffering social
isolation, disbelief from
the medical clinics,
exorbitant increase of living
costs, and when Wi-Fi was

introduced into the public schools in 2010, I got an out-break when substituting in the school, and had to quit, as well as quit training on a school bus drives.

In 2011 I was 65, and had applied for Social Security. I made a formal submission to the Monitors Social Security Commissioners of this increasing illness, since I couldn't afford to retire and was attempting to apply for disability based on this illness. He informed me this Government doesn't recognize E.H.S. as an illness.

My experience made born my husband and myself dedicated to learn everything we could about this illness. Our conclusions were that the exposure to cell-radiation builds up in my body's cells and then abrupt release as a burn. That duration of illness

To: Office of Secretary
Federal Communications
Commission

was reduced from 30+ days
to 5 days by having the
titanium bridge removed
from my upper pallet, by
Comfort Dental pulling my
remaining teeth, and
being fitted for a resin
upper denture.

We read that having
metal on or around one's
head greatly increased
cell-radiation effects on
those who suffer with E.H.S.

I had protested doing this
because of the discomfort of
this ordeal, but my husband
insisted and I complied.
I was so grateful for John's
loving support, when even
my own family couldn't
believe this illness is real.

John suffers from insomnia,
chronic fatigue, and over-all
achiness. He can't live with
me, since he's still working
as a part time plumber,
and has all his equipment
& tools on his property, plus
his computers at his place.
He's close to 75 years of age.

Luckily I rent a farm black house on a hill side, with a metal roof, surrounded by hill side on 3 sides, I have 2, \$600. Resonators plugged into the house current to ground the house more. I'm less than a mile from Sam's so we're able to eat and watch T.V., together. (yes, satellite T.V. - does affect me in the evening, and I must move away from the connecting wire under the floor in the evening -) I have one neighbor using Wi-Fi in their house close to me - but the rest of my neighbors either are gone most times - or rarely use their cell phones. The neighbors who use Wi-Fi - Choose to ignore my numerous requests for them to limit their use of Wi-Fi, and fortunately that person is gone a lot. The SMART METER contributes too! My last out break was on July 14, after wife stopped at Sam's Club in Grand Junction twice in one week.

I had luckily rented a hunting cabin behind a valley from the community's cell tower in Paradox Valley, for \$450. for 14 days to be able to recover again.

When I recover I have a limited time of resistance, in which I strive to live a fairly normal life.

However, even though I want to work still, I'm not able to do so, since I don't know how long that resistance will last.

This illness has stressed our relationship, cost us innumerable extra expenses, and besides 49 episodes of terrible suffering, also social isolation.

To believe that radio-frequency pollution isn't affecting all of us negatively is only because as a Nation we're addicted to these devices and the providers are making a fortune. Please reduce these emissions, do not increase these limits.

Sincerely, Annie Gibbons

From: Annallys Goodwin-Landher
PO Box 2744
Chapel Hill, NC 27515

Regarding: Comments on Notice of Inquiry, ET Docket No. 13-84

Date: September 3, 2013

I request that the FCC revise its standards for human exposure to radio frequency radiation. Please consider protecting human health and wellbeing by making standards more restrictive, removing it from schools, residential areas, hospitals, rehab centers, and senior housing. I respectfully request that this commission consider conversion to a fiber optic system to increase reliability and protect public health.

My first encounter with WIFI was in 2004 when the General Medicine Department at my place of work moved into the Hock building at 2424 Erwin Road, Durham, NC 27705. At the time I was a data technician interviewing patients and their caregivers on the phone and in person using a computer. In order to keep in touch with my co-workers I was required to purchase and use a cell phone. Though there were WIFI antennas on the computers there was an on/off switch. Most of the time the computers were networked into the Ethernet and there was no use of wireless when patient interviews were conducted in the home. Use of the cell phone was sporadic.

Over the next 6 years WIFI antennas were placed in the office increasing overall use. The majority of meetings were conducted in a conference room with WIFI capabilities. Co-workers were using their computers on WIFI during working hours, using Ethernet to upload and download data and for nightly and weekly updates. I was in the conference room at least 4 hours a week with an antenna under the table 1.5 to 4 feet from my abdomen. In meetings it became increasingly difficult to organize my thoughts, read from an agenda or prepared summary, and to field questions. The closer I sat the antenna the worse the symptoms. My short term memory and ability to coordinate thought and speech were most affected.

In December of 2007 I moved into a co-housing community with 47 townhouses concentrated on 5 acres, with a common house and a guest house. I rented a room from a resident and often visited the living room in the common house to read or practice yoga. Several months passed and I noticed a buzzing in my head and difficulty remembering what I read whenever I used the common house living room. I discovered a WIFI antenna located on the window sill directly above my head behind the couch where I sat. Due to the physical reactions, I ceased reading and doing yoga in this space.

In May of 2008 I moved into a condo and noticed immediately that falling and staying asleep became difficult, due to tinnitus, a constant buzzing in my head along with heart palpitations. A year and a half later, as the WIFI system was expanding and meetings were being held in the community to discuss the expenditure and locations of additional antennas, I learned that one was sited 12-15 feet from my main living areas: bedroom; bathroom; dining room, broadcasting 24/7, explaining the disrupted sleep and

other symptoms listed below. When there were 17 antennas in the community it became difficult to walk next to the common house, attend meetings, use the laundry or enter the guest house. As the numbers of antennas increased so did my symptoms; cognitive fog, headaches, nausea, tingling in my arms and head, dizziness, shooting and stabbing pains in my head, and unexplained mood swings. At last count there were over 20 antennas in the community. The exposure to WIFI in my work place and my home contributed to ill health, an inability to do my job, loss of short term memory, constant headaches and shooting pains in my head, neck and ears, mood swings, and an escalation of Lyme symptoms

Descriptions of specific instances where radio radiation disrupts my ability to concentrate, causes pain, confusion, or cognitive impairment:

- Driving a rental car in Albuquerque NM with GPS and becoming totally disoriented, endangering myself and others because I was unable to coordinate my thoughts and actions to make a simple lane change. Pulled the car over to a parking lot and checked out the area, a concentration of WIFI antennas on several buildings. After that I used the bus and biked to get where I was going only renting a car when I traveled out of town to visit an historic site.
- Driving in Santa Fe NM and feeling pain like needles in my temples. Stopping the car and looking around until I noticed a cluster of WIFI antennas and a cell tower within a couple hundred feet on the NM Department of Transportation building.
- Using a cell phone in the car and realizing I was unable to make coherent sentences.
- Riding in the Rail Runner, a commuter train in NM and noting the difference riding in the "quiet" car, no WIFI or cell phone use allowed, and riding two additional times in the cars with WIFI. The two times I rode in the WIFI car I forgot the day of the week, was unable to answer questions when my friend arrived to pick me up, and was dis-oriented the remainder of the day.
- When I visit the outdoor eating space at Weaver Street Market where WIFI boosters are situated along the eaves of the porch with a metal roof I stay as far away from them as possible. I learned a hard lesson; sit in a metal chair at a metal table with metal rimmed glasses and use the WIFI function on the laptop - I will experience shooting pains at my temples and the back of my ears in the mastoid area. I use the public library computers as often as possible. Even though they are on WIFI, I limit the time I spent there. By using the library I cease to activate and increase the draw of radio radiation into my sleeping and living areas.
- While shopping in a local grocery store I note a stabbing pain in my head and feel nauseous, looking up I notice a young man with his cell phone walking by, the pain fades the further he walks down the aisle, increases when he walks back my way.
- A friend moved into a new house and upgraded her wireless phone, strength of the WIFI system and now has a smart meter. I visit for short periods of time, usually less than an hour, until I begin to feel the fatigue and cognitive disruption that results from being around this much low level radio radiation. On September 2nd 2013 I spent 3 hours at her house watering plants while she was away and using her sewing machine. At the end of the time I was unable to concentrate, experienced extreme nausea, and was unable to solve a threading problem even with diagrams. It was about 30 minutes for the acute symptoms to subside and over an hour and a half before most symptoms faded.
- When I use the WIFI function on my computer and place my body between the computer and the wireless booster I experience pain in the area of my heart and left upper chest. I now use grounding sheets and a Russian manufactured blanket with 7 layers of metal fabric that blocks radiation, still the proximity to wireless in adjoining houses continues to cause buzzing in my head at night.

- I live in a lower apartment in a house that uses wireless phones. Now I remove the batteries and unplug the base in the apartment or remove it to the other side of the house. I sat next to the plugged in charging station and experienced a vibrating pain along my arm. Only after unplugging the base did the pain subside.
- If I hold a cell phone anywhere near my head, I experience shooting pains around the area of the ear that can last as long as 24 to 48 hours
- I avoid public areas, shopping malls, and shops offering WIFI.
- Travel became more difficult as the number and proximity of cell towers to the highways and freeways increased. I notice cognitive disruption, pain, at times nausea, and slight to severe disorientation when traveling by cell towers. To get stuck in traffic where there are numerous antennas and towers causes extreme fatigue, mood swings and pain.
- Visiting my daughter in Charlotte, NC means an escalation of symptoms due to the density of cell phone towers and antennas in this city.

Please reconsider the health hazard that radio radiation presents to the citizens of this country by creating more restrictive standards and including health considerations in the siting of cell towers and antennas. In addition, please consider paying attention to the research that indicates there are short and long term health effects on children constantly and repeatedly exposed to these frequencies.

Respectfully Submitted,

To Whom it May Concern:

I have been injured by RF radiation that complies with current exposure limits.

I was injured by two wireless AMR (Automated Meter Reading Devices) that my utility company SCE&G/SCANA put on my house without my knowledge or consent in December of 2012 and January of 2013. I was living in Charleston, South Carolina at that time. I developed Toxic Encephalopathy due to EF Effects within weeks of the devices being put on my home. I was bedridden for over 6 months in horrible pain. I have had severe changes in many of my bodily systems, organs and brain function. I became allergic to many everyday substances like petroleum products, car exhaust, commercial printing ink, chlorine, many synthetic fabrics, new construction materials and more. It took 2 years to discover the cause of my illness and by that time I was very, very sick and had developed terrible Electro Magnetic Sensitivity which has completely changed my life.

In August of 2012, I was diagnosed with Toxic Encephalopathy (349.8) and Neurologic EMF Related Encephalopathy (348.30; E926.0). I have become Electrically Sensitive and am symptomatic around just about anything that is plugged in or has a computerized motor. I am attaching my diagnosis from my physician as well as a letter my physician wrote to the President of SCE&G/SCANA.

SCE&G/SCANA refused to remove the AMR meters from my home and replace them with analog meters even though I asked 3 times and had doctor's letters requesting them to do so. I was forced to abandon my home in August of 2012. I had to leave the town I was living in and move to a community 45 minutes away. I am a single mother who is the primary care giver of a young child. I cannot go near any building that has a wireless router. I cannot be near people holding or carrying cell phones. I cannot be near electrical equipment, office equipment or under overhead

To Whom it May Concern:

I have been injured by RF radiation that complies with current exposure limits.

I was injured by two wireless AMR (Automated Meter Reading Devices) that my utility company SCE&G/SCANA put on my house without my knowledge or consent in December of 2012 and January of 2013. I was living in Charleston, South Carolina at that time. I developed Toxic Encephalopathy due to EF Effects within weeks of the devices being put on my home. I was bedridden for over 6 months in horrible pain. I have had severe changes in many of my bodily systems, organs and brain function. I became allergic to many everyday substances like petroleum products, car exhaust, commercial printing ink, chlorine, many synthetic fabrics, new construction materials and more. It took 2 years to discover the cause of my illness and by that time I was very, very sick and had developed terrible Electro Magnetic Sensitivity which has completely changed my life.

In August of 2012, I was diagnosed with Toxic Encephalopathy (349.8) and Neurologic EMF Related Encephalopathy (348.30; E926.0). I have become Electrically Sensitive and am symptomatic around just about anything that is plugged in or has a computerized motor. I am attaching my diagnosis from my physician as well as a letter my physician wrote to the President of SCE&G/SCANA.

SCE&G/SCANA refused to remove the AMR meters from my home and replace them with analog meters even though I asked 3 times and had doctor's letters requesting them to do so. I was forced to abandon my home in August of 2012. I had to leave the town I was living in and move to a community 45 minutes away. I am a single mother who is the primary care giver of a young child. I cannot go near any building that has a wireless router. I cannot be near people holding or carrying cell phones. I cannot be near electrical equipment, office equipment or under overhead

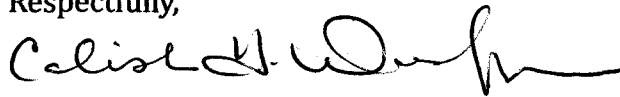

No. of Copies rec'd 0
List ABCDE

lights. I cannot be near most TV's. I cannot cook on a regular stove anymore and have to cook outside with a hot plate and toaster oven.

I can no longer go out in public, I cannot take my child to the library because of Wi-Fi in Public Libraries. I had to hire someone to do my grocery shopping and errands for me. I cannot go into my child's elementary school because they have Wi-Fi. I cannot go to a Hospital or City Hall. I had to give up my cell phone long ago. I have not been able to go to a gas station to fill up my car in over 2 years. I have to rely on other people to help me with this. I cannot go near an airport. My own vehicle makes me sick because the engine puts off so much EMF and I have been looking for a low EMF car for over a year.

Every aspect of my life has been impacted. The work I can perform is very limited because of the severely limited parameters of this awful condition. I graduated with Honors from both Phillips Academy (Andover) and Duke University. I am a serious minded person. I sustained this injury because I was exposed to dangerous and harmful radiation in my own home without my consent or knowledge. The FCC MUST revise the standards for human exposure to radio frequency radiation and make them more restrictive and minimize the amount of exposure to which the public is subjected. The FCC MUST also take into account the growing body of RECENT scientific literature on the harmful, non-thermal effects of EMF/RF radiation.

Respectfully,

A handwritten signature in black ink, appearing to read "Calista H. Woodbridge", with a stylized, flowing script.

Re: Comments on Notice of Inquiry, ET Docket No. 13-84

To Whom it May Concern,

My name is Elizabeth. 10 years ago I was a very happy, successful and vivacious woman living a life most people would consider the epitome of the American Dream. My husband and I both enjoyed being active and keeping physically fit, and as a result both enjoyed robust good health until, one day, I just stopped being healthy anymore. Year after year one mysterious illness after another became my constant companion and I struggled to maintain as normal a life as I could for me and my still healthy and loving husband. Finally forced by my mysterious illnesses I had to abandon my career and our beautiful home and was thrust out on a quest to regain my good health and reclaim our former life. After much research we discovered treatments that slowly helped me to regain my former good health and for the first time in years we were sure that my recovery was just around the corner. Then in 2005 I began experiencing some new and even more painful and puzzling symptoms. Every time I used my cell phone my ears would start ringing loudly and after time, if stayed on it for more than a few minutes, my head would feel like it was in a vice and would then start to burn. The same symptoms started happening when I used the computer until eventually every cell phone and every computer in any environment started becoming problematic for me. I tried every way to try to shield myself from the painful radiation exposures, but it soon became clear that the only way to avoid it and the accompanying symptoms was by avoiding all public places (including hospitals) where these devices were being used - efficiently sending me back into total seclusion only this time I couldn't even find safety in my own home as the radiation emitted from cell towers, neighbor's wireless computer systems, and GPS equipped cars passing on the street passed through our home and began sickening me 24 hours a day, 7 days a week, 365 days a year. In the last two years as the networks have ramped up their 2G, 3G then 4G networks I have developed terrible and persistent migraines, atrial fibrillation, circulatory problems, digestive problems, sleep problems and rheumatoid arthritis. The chronic fatigue and fibromyalgia that had previously been cured are back and worse than ever experienced before. I cannot walk, eat, sleep nor think correctly. I cannot clean my home nor care for my husband and I am chronically and clinically depressed. I am only 57 years of age, but feel like a 90 year old woman. And now I'm told that you're going to allow my electric and water companies each to install radiation emitting devices on my house and there's nothing I can do about it. Is it really necessary for me to slowly die at 57 years of age in agonizing and unbearable pain just so that people can have faster and faster phones and computers and we can be monitored for our water and electric usage? Does my husband really have to watch me suffer day after day eventually watching his young wife being lowered into the ground so people can speedily read a minute by minute, blow by blow account of every time a celebrity visits a rest room? You are directly responsible for mine and many other's suffering and you can put a stop to it by accepting the non industry generated science about radiation and the human body and putting tougher regulations on the amount of radiation allowable to be transmitted by these devices and cell towers. Today approximately 3+% of the population are suffering as I am, but the number will most definitely grow as you allow higher and higher amounts of radiation to penetrate the bodies of the public. And what of us 3%? Please do not think an apologetic "we had no idea this was doing this to anybody" will suffice because the science is out there and you are aware of it but are choosing to ignore it. All I know is that I am losing my life and the FCC doesn't seem to care. But I bet you would care if I was your wife, or your daughter or your mother. I bet you'd care if one of your own was going to be killed because of the amount of radiation that you're allowing to be emitted by all of these deadly toys. Sadly, perhaps tomorrow, it will be.....

"Comments on Notice of Inquiry, ET Docket No. 13-84."

(enclosed 2 copies)

You, the FCC, has been remiss in protecting the American public from exposure to exceptionally high RF energies. The existing regulation, based on thermal heating, is ridiculous. You must restrict the exposure of the American public to significantly reduced levels, and self policing by the industry must end.

It is medically unacceptable to install devices without the knowledge or consent of individuals. Merely putting a note in a monthly bill is insufficient notification for such a serious hazard. Many people do not notice or understand such inserts, most individuals regard inserts in their monthly bill as advertisements for other irrelevant information and it is easy for such notices to be omitted during the mailing and notification process. It also completely fails to address the vital issue of location. Would anyone put a device near the head of a child, pregnant woman, elderly person or anyone at all given the current lack of human safety data?

Present standards for exposure rely heavily on the amount that would raise temperature of body tissue. This neglects evaluation of neurotransmitter function, which can be altered by much smaller doses. I recognize that device manufacturers should be expected to have more expertise than a utility user company: SCE&G/SCANA may have been misled by manufacturer or industry association lack of knowledge and /or misinformation.

Action is now essential to scientifically evaluate health effects and to take prompt corrective measures to prevent more individuals from developing problems, and to prevent the further disabling of persons who have been affected.

I await a response regarding both the submission of scientific studies documenting "safety" of these residential devices (where 24/7 exposures can occur), which I need promptly, and the corporate plan to assess and minimize damage to the health of the public.

Sincerely,

Grace Ziem, M.D., MPH, Dr.PH

Dear Secretary, 8/30/13
Comments on Notice of Inquiry
ET-DOCKET NO. 13-84

I implore you to stand up to the Telecom industry & preserve our constitutional rights to refuse injurious technologies such as smart meters & wireless cell phones & cell towers. Our right to protect ourselves from these overwhelming & dangerous technologies is a constitutional fact & if it weren't for the corrupt judges who refuse to uphold our constitution, we would have the ability to protect ourselves.

It is a fact that wireless radiation is an invisible killer & people are dying of these invisible microwaves by the millions. Cancer, autoimmune diseases are rampant now & the Telecom industry smug about our inability to prove it.

Well, here's my story - I came down w/ serious hearing problems when I was using my cell phone for 5 yrs. I live on a boat so land lines were inaccessible to me. I started hearing strange sounds in my head - sounds I cannot explain because they are indescribable but ugly comes close, & loud. Someone warned me about cell phones & so I stopped using them except for emergencies. The sounds went away but my hearing was impaired forever.

I use land lines now & want to keep myself healthy, we must stop the invasiveness! It's your moral duty to your fellow man, & yourself. You're affected as well - some of us are the canaries in the coal mine. Heed our warnings go with God - Most restrictive sincerely, Loma Moffat

Before you go into a contest aimed at assessing whether cell tower fields are safe or a health risk, you must decide in advance what you consider to be acceptable evidence of one or the other inference. If you can't do that, you're wasting everybody's time. Finally, I want to make it clear that I do not want to be understood as somehow advocating some kind of massive governmental rule-making intervention in the cell phone area. I think that would be the worst possible thing that could happen. It would be a disaster. The EPA and the FCC are woefully inadequate to deal with this issue. So is, in my view, the NIH and the World Health Organization. All these groups are hamstrung by traditions, constituencies, rules and laws. Perhaps the best you can hope for is that research is done, that it is not rigged, that all the results are made available to you if you want them, that all the issues are evaluated on a level playing field where both sides have equal resources and are able to confront the experts on the other side. That's as good as it gets.

Then you have to make a choice.

Comments on Notice of Inquiry, E.T. Docket No. 13-84

Although emergency services and certain sorts of business interest make a strong claim in favor of fewer restrictions, the debate needs to continue for more restrictive use of this growing trespass/pollution. If communities are prevented from acting, even neighborhoods within communities acting independently, the quality of life will proceed 'down the tube' for ever more and various citizens. See the analysis quoted above.

Sincerely, Stephen Kindler, Sr.
