**My Recommendations for HHS and the FCC to "PROMOTE SAFETY OF LIFE AND PROPERTY" for all RF/MW Radiating Devices:**

I second the 15 Recommendations of the New Hampshire Council:

Make Protecting our Children and Education a priority.

Increase transparency by the wireless industry, reduce exposure, and support science.

Reevaluate Radiation Exposure Guideline Limits and Policies

All of these endeavors (basic science, clinical assessment, epidemiological studies) must be completely independent and outside of commercial influence.

Require all new cell phones and all other wireless devices sold come equipped with updated software that can stop the phone from radiating when positioned against the body.

Promote and adopt a countrywide position that would strongly encourage moving forward with the deployment of fiber optic cable connectivity, internal wired connections, and optical wireless to serve all commercial and public properties statewide.

Support the medical community to clarify the clinical presentation of symptoms precipitated by the exposure to radio frequency radiation consistent with the Americans with Disabilities Act (ADA) which identifies such a disability.

My additions:

1. WARNING LABELS on all devices (similar to requirements of cigarettes, and drugs)

2. TAX the purchase of all devices for funding unbiased research

3. "No Cell Phone Zones" required in Public Spaces

4. Public Access Alternatives for the Disabled unable to use Smartphones

4. Mandate Opt Out options for all Metered Electric and Water providers

5. Tax devices such as cell phones to provide funds for Hardwiring in schools rather than WiFI. Hardwire everything in schools

6. Allow Wireless Opt outs for ALL schools

7. Don't let Wireless devices into the classroom: "Phone Free" schools"

8. Remove Cell Towers near schools, hospitals, elderly living facilities, etc. (setbacks)

9. Don't slave us to carry a Smartphone to interface with any institution or business when the warning label inside the phone advises: Keep 1" from the body. Use hands free." **How are we supposed to accomplish this?**

10. Tax products to provide Public Education of health risks in prominent venues.

11. Tax all devices to provide Environmental Safety— For Bees, Pollinators, Birds, Wildlife and all vegetation which has been documented as effected

12. For all Government and private agencies: Follow the mandate to use as little radiation as possible to accomplish goals of "promoting safety of life and property" as per the (Communications Act of 1934 and the Telecommunications Act of 1996).

13. For Healthcare Facilities, require "Reasonable Accommodation" for those with RF / MW disability.

14. Tax Radiation emitting devices and use the funds to provide RF/MW Meters at schools and libraries so that people can check them out to test their homes, etc.

15. Study the cumulative effects of multiple devices at once

16. Seriously address invasion of privacy as a violation of human rights and the constitution.

17. Require all computer and cell manufacturers provide an option for a small file size. As an example— my photos now are 7-8 MB, when 3 years ago they were 2, and 7 years ago they were under 1.

18. Have a "Save our Bandwidth" campaign to educate that bandwidth is finite and needs to be conserved. Follow the mandate to use as little radiation as possible.

19. Provide the ability to Opt Out of:
    The Internet of Things
    The Internet of Bodies
    Smart Cities
